

PHS Washrooms Case Study

Cocks Moors Woods Leisure Centre, West Midlands

Cocks Moors Woods Leisure Centre is in the Kings Heath area of Birmingham. Offering a huge selection of leisure facilities, it has over 100 staff and serves over half a million visitors every year.

With such a large volume of people using the leisure centre, it is essential that the washrooms are in excellent condition, with cleanliness and hygiene of utmost importance. To ensure that these requirements are adhered to, 12 Airforce™ hand dryers have been installed.

Not only does installing Airforce help to keep washrooms clean and hygienic, the low power output will also ensure that considerable energy savings can be made. At Cocks Moors Woods, the saving compared to previous hand dryers is around 81%!

Common Problems:

- High energy use
- Inefficient dryers
- Water splashes on wall and floor
- Dryers have potential dirt traps due to design
- Plastic covers can age quickly

PHS Solution:

- Installation of PHS Airforce
- High speed, low energy, just 1.1 kW/h power output
- Incorporates SteriTouch® antibacterial surface protection, dramatically reducing spread of bacteria such as MRSA, e-coli and Salmonella
- Designed by World Dryer Corporation, world leaders in hand dryers for over 60 years
- 11 air outlets offer wide distribution of airflow, increasing comfort and reducing dry time
- Die-cast aluminium cover means dryer is sturdy and long lasting; smooth design ensures no dirt traps

"I am very impressed with the new Airforce hand dryers. Their low energy use means that we're saving money and they also look great! They are comfortable to use, dry hands really quickly and also ensure that there are no water drips on the wall below the dryer or the floor, as had happened with previous hand dryers."
