

LEADING THE WAY

TO BETTER HYGIENE, MORE SAVINGS AND MUCH LESS IMPACT ON THE ENVIRONMENT

PHS Washrooms has an ongoing commitment to invest in new product development. This ensures the company is well placed to meet the changing needs and demands of its customers – from FM and contract cleaning companies to end-users.

Helping customers to save energy, water and money, as well as to meet environmental and sustainability targets, is a driving force in PHS' product development.

The latest innovation to join its award winning product line-up is SMARTdri. This high speed, low energy hand dryer blows other hand dryers out of the washroom. A step up from warm air hand dryers, SMARTdri has no heating element, which means it uses very little energy coupled with outstanding performance from new technology. Designed by World Dryer, the world leaders in hand dryers, SMARTdri is arguably the best performing hand dryer available today.

This innovative product uses only 0.8kW/h of electricity. And with new technology that utilises a powerful combination of air velocity and air-flow, it dries hands in just 10 seconds. This development makes SMARTdri the most energy efficient and fastest hand dryer available. Using around 90% less energy per dry than traditional dryers, and 50% less than other new hand dryers, SMARTdri raises the bar for energy efficient hand dryers.

Hygiene is also a strong feature of SMARTdri. It incorporates SteriTouch antibacterial surface protection, which drastically reduces the spread of germs such as E.coli, Salmonella and MRSA. Automatic no-touch operation further reduces cross contamination. SMARTdri becomes the latest product in the PHS Washrooms SteriTouch Range. This range of core washroom products, with permanent, built-in antibacterial protection, means staff, visitors and customers enjoy the highest levels of hygiene.

Available in white and polished chrome finishes, SMARTdri is a reliable, powerful hand dryer with very low energy use that is suitable for the most demanding environments.

SMARTdri – raises the bar for high speed, energy efficient hand dryers

Ian Osborne, managing director of PHS Washrooms said: *“As the UK’s leading washroom services provider, we are pleased to work exclusively in partnership with World Dryer to bring SMARTdri into our market-leading range. With exceptional energy-saving credentials, SMARTdri is a new generation hand dryer that meets today’s needs.”*

In addition to SMARTdri, PHS Washrooms has recently added another new product to its range. Autosan is PHS' new cistern sanitising unit. It automatically doses a sanitising fluid into WC and urinal cisterns to deodorise and destroy bacteria, helping to keep washrooms clean and hygienic.

Used together, Autosan, Eco-shield (the company's exclusive clever urinal sleeve), and Flush-wiser Urinal Flush Control (its award winning intelligent water management system), are a complete package to keep urinals free from malodours and water efficient, saving up to 90% of water against uncontrolled urinal cisterns therefore also saving money.

Autosan can also be used with the award winning Flush-wiser WC Flush Control (which reduces the amount of water used to flush a WC by up to three litres) to help keep WCs hygienic and efficient.
