

SaverTap

Help reduce water usage

The SaverTaps are designed to convert your existing twist taps to a more efficient push-on option. They prevent taps being left on, reducing water wastage and the risk of flooding.

Key Features

- Makes your washroom more water efficient
- Can save you up to 80% on sink water usage
- Helps reduce your water bills and impact on the environment

Efficient

The SaverTaps are ideal for public washroom facilities where taps left running can be a common problem. Not only do they save you the cost of thoughtless water wastage and reduce the risk of flooding they also help to reduce your water usage and costs.

Practical

Easily and quickly installed by a PHS technician, the SaverTaps convert your existing twist-on taps to a WRAS approved push-on option.

Saving Water

The SaverTap can be installed to provide either a 5 or 10 second flow of water. Assuming an average flow rate of 5 litres per minute, a 5 second setting would use approximately 0.41 litres of water and a 10 second setting approximately 0.83 litres.
