

Water and Energy Saving Guide

Providing outstanding leisure facilities on a tight budget can be a challenge. By becoming more efficient however you can improve customer experience while saving money, and having a positive effect on the environment too.

One of the easiest ways to achieve this is by installing intelligent control systems that monitor and reduce the amount of water that is used.

> pHS water & energy products

Flow saver - Using innovative, patented technology, our urinal water management system can save up to 80% of water used in urinals

Autosan cistern sanitiser - Our Autosan WC and cistern sanitiser injects sanitiser directly into the cistern to deodorise and destroy bacteria at the source

Eco-shield - The Eco-shield™ urinal sleeve significantly improves hygiene in male washrooms for staff and customers. Works in conjunction with Flow saver

Savertap push taps - SaverTaps are ideal for those on a tight energy budget. The design converts your existing taps to a more cost-efficient push-tap type design, saving up to 80% of water

Flushwise - Our award winning Flush-wiser® is attached to the cistern to dramatically reduce water consumption in WCs without lowering the standard of hygiene

> Top tips

- Know where your supply pipes run and where the shut off valves are.
- Determine where your wasted water is going and if or how you can recycle it in other areas of your business.
- Avoid using harsh chemicals to clean, rather choose a biological cleaner, like **Micrakleen** a natural, biological washroom cleaner which helps remove urine based odours. It can be used throughout the washroom, including diluted on floors and tiles.
- Use signage to help educate your employees on the importance and practices of water efficiency. If employees are aware of the costs then they will be more careful with their water usage.
- Try and set water usage targets and encourage widespread involvement to achieve this.

> Key features

- **Flow-saver**[®] can save up to 80% (with an average of 70%) of your water consumption when compared to an uncontrolled cistern.
- **Eco-Shield** controls odours deep into the pipes. In male washrooms the use of Urinal sleeves helps to clean deep down into the pipes, where odour causing bacteria can thrive.
- Automatic taps stop the risk of them being left running, which not only wastes water but can cause flooding. Our **SaverTap** is designed to save up to 80% of water used.
- **Flush-wiser**[®] is attached to the siphon in the cistern, where it reduces the amount of water used to flush by up to 3 litres.
